**Information on the asset valuation method**

In accordance with §27 KARBV, the latest available market price that ensures a reliable valuation is used as a basis for assets that are admitted for trading on a stock exchange or other organised market or that are included in such. For assets that are neither admitted for trading on an exchange or other organised market or included in such, or for which no trading price is available, market values are used in accordance with §28 KARBV in connection with §168, Para. 3 KAGB, based on careful assessment using suitable valuation models and taking current market conditions into account.

Underlying fair value may also be determined and communicated by an issuer, counterparty or other third party. If so, such a value is checked for plausibility by the management company or custodian, and this plausibility check is documented. Units in domestic investment funds, EU investment funds and foreign investment funds are valued at their latest redemption price or at a current price in accordance with § 27 (1) KARBV. If current values are not available, the value of units is determined in accordance with §28 KARBV; reference is made to this in the annual report. Bank deposits are valued at their nominal value plus accrued interest. Time deposits are measured at fair value. Liabilities are recognised at their repayment amount.
